## **EXTERNAL INTERACTION AS AN IMPORTANT COMPONENT OF THE ENTERPRISE ECONOMIC SECURITY**

A market economy creates unpredictable conditions for activities of Ukrainian enterprises. In the environment of not always civilized competitive relations, imperfection of the current legislation, in unstable political and socio-economic situation, despotism of fiscal authorities, society criminalization and so on, it is necessary as early as the creation stage to determine measures of providing economic security of a firm in order to minimize or prevent negative influence of possible threats and their consequences in the future. In the circumstances concerned, an improvement of the interaction of security departments of enterprises with external subjects, in our opinion, can become an important direction for improving the level of the enterprise security from external threats.

The article considers a state of interaction of services of economic security of enterprises and external subjects. Problems that hinder the development of this interaction are determined. Recommendations for increasing the efficiency of cooperation of participants on providing economic security of the enterprise are given.
